PROFILE SUMMARY

Senior Frontend Developer with 5.5+ years of experience building scalable, high-performance React applications in healthcare and enterprise domains. Proven track record of leading jQuery-to-React migrations (45% load time reduction), driving WCAG accessibility compliance, and architecting modern frontend systems serving 10,000+ daily users. Experienced in mentoring junior developers, conducting code reviews, and defining frontend standards for cross-functional teams. Seeking a Senior / Tech Lead Frontend role at a service-based MNC to drive engineering excellence at scale.

TECHNICAL SKILLS

Frontend:	React.js, JavaScript (ES6+), TypeScript, Redux Toolkit, TanStack Query, Tailwind CSS, HTML5, CSS3
Testing:	React Testing Library, Jest, Unit Testing, Component Testing
Build Tools:	Webpack, Vite, Code Splitting, Lazy Loading, Tree Shaking
Backend:	Node.js, Express.js, MongoDB, Mongoose, REST APIs, JWT Auth, AI Integration
DevOps:	Git, GitHub Actions, CI/CD basics, Render, Netlify
Practices:	Performance Optimization (LCP/TTI), WCAG Accessibility, Responsive Design, Agile/Scrum, Code Review, DSA

EXPERIENCE

Senior Frontend Developer

Infinity Labs

May 2025 – Present

Noida, U.P.

- Built and maintained scalable healthcare web applications using React.js, TypeScript, Redux Toolkit, and Tailwind CSS, serving **10,000+ daily users** with responsive, accessible UI components.
- Led the full migration of a legacy jQuery codebase to React, reducing page load time by **45%** and improving code maintainability; defined component architecture and coding standards adopted by the team.
- Mentored 2 junior frontend developers through code reviews, pair programming, and documentation of best practices, reducing onboarding time by ~30%.
- Optimized application performance via lazy loading, memoization, code splitting, and caching strategies — improving LCP/TTI metrics and achieving WCAG 2.1 AA compliance across all major modules.
- Collaborated with Node.js/MongoDB backend team to integrate RESTful APIs, implementing authentication flows, pagination, error boundaries, and retry logic for higher reliability.

Frontend Developer

Tech Mahindra

June 2021 – May 2025

Noida, U.P.

- Delivered enterprise-scale React.js applications across **5+ business modules** for a large telecom client, building reusable UI component libraries consumed by a team of 8 developers.
- Led Redux Toolkit migration for global state management across 3 major modules, eliminating prop-drilling and improving data consistency; reduced state-related bug reports by ~40%.
- Reduced page load time by **30%** through render optimisation, code splitting, and API response caching — directly improving user experience scores in quarterly reviews.
- Participated actively in sprint planning, daily standups, and PR reviews; reviewed 50+ pull requests per quarter and provided structured feedback to maintain code quality standards.
- Collaborated with design, QA, and backend teams in a cross-functional agile environment, driving features from requirements to production release.

Embedded Automation Engineer

Dynatech Controls

July 2020 – June 2021

Gurugram, Haryana

- Engineered and debugged firmware for microcontrollers using C/C++, implementing I2C, SPI, and UART communication protocols for real-time control systems, reducing power consumption by 20%.

- Transitioned to frontend software engineering, applying systems-level thinking and a low-level performance mindset to web development — strengths that directly inform frontend optimization work today.

PROJECTS

DevMeetup | [React](#), [TypeScript](#), [Node.js](#), [Express](#), [MongoDB](#), [Tailwind CSS](#)

[GitHub](#) | [Live Demo](#)

- Built a full-stack MERN application with JWT + HttpOnly cookie-based authentication, supporting multiple user roles, profile management, connection requests, and a fully responsive UI.
- Designed and implemented scalable RESTful APIs in Node.js/Express; optimized MongoDB schema design for data consistency, contributing to a **25% increase in developer productivity** metrics on the platform.

E-Commerce App | [React](#), [TypeScript](#), [Firebase](#), [Bootstrap](#), [Netlify](#)

[GitHub](#) | [Live Demo](#)

- Architected a feature-complete e-commerce app with product browsing, filtering, cart management, and checkout; integrated Firebase Auth and Firestore for real-time data sync and user session management.
- Implemented performance optimizations (lazy loading, memoization) achieving fast initial load; deployed on Netlify with automated CI/CD pipeline.

EDUCATION

B.Tech — Electronics and Instrumentation Engineering

Aug 2011 – Sep 2015

Uttar Pradesh Technical University, Lucknow

CERTIFICATIONS & TRAINING

- Frontend Development — [View Certificate](#)
- React.js — [View Certificate](#)
- Data Structures in Java — [View Certificate](#)
- Full Stack Web Development (MERN) — Coding Ninjas (Sep 2022 – Jun 2024)
